Goals	• Create successful demo on demo day • Meet product expectations of industry partner adorsys • Meet defined requirements • Build trust and rely on your teammates • Meet each other with mutual respect and acknowledge the individual skills • Have efficient and agile working environment
Meeting norms	• Mandatory weekly team meetings (sprints): Wednesday 12:30 PM – 2:00 PM • Come prepared to each sprint • Come to each meeting on time • Present assigned issue (github project) • Follow the agenda of the sprint and stick to the allocated timeframe • Define purpose of next meeting at the end of a sprint • Fill out hapiness index after each sprint meeting • Meeting protocoller has to summarize important information the meeting in the document "meetings" in teams
Working norms	• Working on github project with clearly assigned tasks and tags • Each issue (github project) includes min. 1 assignee, sprint tag and estimation tag • Issues should only be moved to the Sprint Backlog during the weekly team meetings at sprint planning • Issues should only be moved to the Feature Archive during weekly team meetings at sprint release • Support each other when needed • Issues are not assigned but individual team members are motivated to take on tasks independently
Coordination norms	• PO & SM is responsible for leading Team Meetings and keeping meetings on track • Release Manager is responsible for weekly sprint releases and to keep "read me" updated • Assignments/issues are allocated together in sprint meetings • Overview of roles is defined in the Role Assignments tab
Communication norms	• Frequent and topic related communication in Teams by using the appropriate channels • spontaneous and quick updates via Signal AMOS - DIdentity internal group • Avoid sharing imporant information via a voice message • Ensure open and direct communication, where every team member can express and discuss ideas, concerns, questions • Criticize each other constructively and directly • Check Teams once a day and respond to requests/messages • Check E-mail at least once a day and respond to requests/messages • "Reply to all" in mail conversations • All messaging is public • When sending Mails, use an "[AMOS]" in the beginning of the subject and use project e-mail • Time of team communication 8 am - 8 pm

Consideration norms	• Every opinion is considered • Agreement is achieved by discussing topics in the weekly sprint meetings (based on 2/3 majority in the worst) • Use "Planning Poker" to discuss estimations, if disagreement conduct a discussion and revote
Cont. improvement norms	• Present tasks and progress in weekly meeting • Instant evaluation and feedback
Rewards	• Celebratory moving of issues into “Feature Archive”-Bucket on github project • Everybody else cheering • Celebrate turn-in of homework with a Beer in a "Biergarten" or club
Sanctions	• Violating norms • Failing to meet obligations • Being late (Postponing possible one day earlier) in case of technical problem or other proper reasons can be tolerated • Sanctioned person has to do push-ups or give around of drinks/food AND has to put extra effort in work to make up for the lost time

Term	Definition
basic personal data	the basic personal data is the collection of data that has to be filled out at the "Create new DI" registration process (e.g. name, surname, email)
personal data	the data of every DI that is stored in the database
digital identity (DI)	a unique object that is clearly linked to one living person. It comprises the personal information stored about that person. (technical term in lissi: connection)
connection	synonym to digital identity
HR employee	person working in the HR department who is responsible for the creation and administration of digital identities at Adorsys.
schema	(= schema in lissi)
credential definition	(= credential definition in lissi)
credential	a credential definition that got assigned to a DI
credential proof	(= credential proof in lissi)

Product Vision	Project Mission
In numerous situations, such as contracting, travel, Internet, purchasing processes access or access control, people need to uniquely identify and authenticate themselves. A variety of carriers and processes are required for identification and authentication in different areas of life and business: IDs, cards, documents, passwords, electronic data, or hybrids. To obtain a new document or access to a system, the same data of a person is needed over and over again, and must be captured and verified each time. First name, last name, date of birth, gender, profession, personal characteristics and more, depending on the area and application. A digital identity that is recorded, verified, securely stored, and managed in a trustworthy manner solves this problem and creates security and efficiency. Every individual and every institution can use their own digital identity to uniquely identify and authenticate themselves and also digitally sign documents in a legally valid manner.	Adorsys wants to implement Digital identities for all employees, guests and partners working for the company, to digitalize and simplify the identification and authentication process at adorsys. Starting with the creating digital identities for all stakeholders that are stored in the lissi app, defining authentication schemas and allowing access to its workers are the key goals for this project. In the future, adorsys envisions unlimited possibilities of using the digital identities for example as doorkeys and is keen to build up this network of partners within the lissi network.

#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down
7	**Technical refinements and prepare credentials**	**Tidy up, implement testing for all processes. Prepare to include credentials-process in DIdentity**			**12**		**11**	
			# 51 backend: create new schema which is saved on lissi backend	2		5		
			#62 frontend-backend connection: create new schema	3				
			#54 backend: provide existing schemas to frontend	2		3		
			#93 frontend refactoring					
			#110: store URL for DI in local database	2		1		
			#121 backend refactoring					
			#119: add tests for the backend					
			#128: create a secure initial password					
			#118: add tests for the frontend					
			#111: backend: create credential at Lissi API	3		2		
8	**Credentials**	**Add processes for credentials in frontend and backend and connect to Lissi API**			**22**			
			#62: frontend-backend connection: create new schema	3				
			#130: change password					
			#118: add tests for the frontend					
			#128: create a secure initial password	8				
			#115: overview page over existing credential-definitions	3				
			#114: add DI to existing credential-defintion via popup window	5				
			#130: change password					
			#112: create new credential definition - page	3				
9	**Proofs**	**Add processes for proofs in frontend and backend and connect to Lissi API**			**30**			
			#164 Prefilled formular on initial password change	2				
			#37 Forgotten password	3				
			#165 Create DI: adjust: tickbox HR employee yes/no	1				
			#166 Delete DI on Adorsys Lissi Blockchain	2				
			#167 Create proof template	5				
			#168 Send proof request to DIs/connections	3				
			#169 Overview of proof templates	3				
			#114 Add DI to existing credential-defintion via pop-up window	5				
			#112 create new credential definition - page	3				
			#170 authorization: unauthorized users cannot access frontend and send request to backend	2				
			#140 create mail account for testing and use it in DIdentity	1				
			#139: Docker: Host our service					
			#171 Overview of DI values for open credentials, open proofs, connection status					
10	**Edit and delete functionalities**	**Build processes for editing DI-, schema-, credential-,proof-informtion and deletion**			**22**			
			proof: be able to check attribute values					
			send proof request connectionless					
			detailed overview of one proof					
			Display more feedback to HR employee during processes --> have a look at Docker					
			frontend: include styleguide/mockup for pages	8				
			edit DI on Adorsys Lissi Blockchain	5				
			edit schema on Adorsys Lissi Blockchain	5				
			edit credential on Adorsys Lissi Blockchain	3				
			edit proof on Adorsys Lissi Blockchain	3				

#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down
			delete schema on Adorsys Lissi Blockchain	2				
			delete credential on Adorsys Lissi Blockchain	2				
			delete proof on Adorsys Lissi Blockchain	2				
			have role "HR-employee" which implies that he is allowed to access DIdentity					
			Dashboard: create ability to display pending processes (with respect to DIs, credentials, proofs)					
11	**Helper/peripheral functionalities**	**make all processes on DIdentity platform work successfully and add missing connections**			**13**			
			automize more processes: DI-creation of casual employee triggers credential creation...					
			datatype/validity check of input from Lissi wallet					
			HR employee can set new password for DIdentity account	5				
			dashboards for homepage	5				
			implement all error pages that are displayed to HR employee	3				
12	**All processes, refactoring & Demo Day preparation**	**Finalize implementation of processes, clean up code, start preparing demo day**			**22**			
			discuss presentation and prepare demo	8				
			create demo day slide	3				
			create demo video	5				
			create public Zoom meeting for demo day and share link with teachers	1				
			Extensive feature testing	5				
13	**Refinement for Final Project Release**	**Refactor, finalize deliverables, get everything in order and place**			**19**			
			finalize user, design, build/deploy documentation	5				
			clean up and finish final project release plan	5				
			@releaseManager: tag code with final-project release	1				
			technical refinements	8				
				Est. Size	Est. Burndown	Real Size	Real Burndown	
					140		**0**	
7	**Rechnical refinements and prepare credentials**	**Tidy up, implement testing for all processes. Prepare to include credentials-process in DIdentity**		12	128		0	
8	**Credentials**	**Add processes for credentials in frontend and backend and connect to Lissi API**		22	106		0	
9	**Proofs**	**Add processes for proofs in frontend and backend and connect to Lissi API**		30	76		0	
10	**Edit and delete functionalities**	**Build processes for editing DI-, schema-, credential-, proof-informtion and deletion**		22	54		0

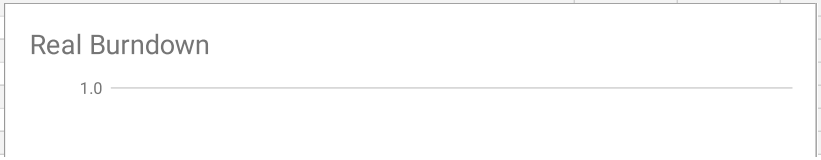
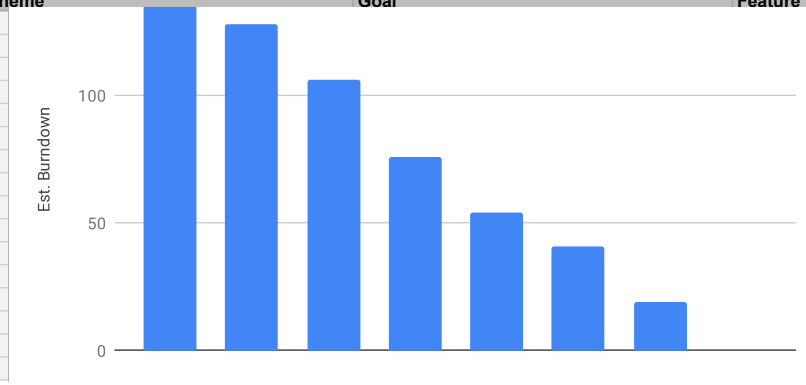
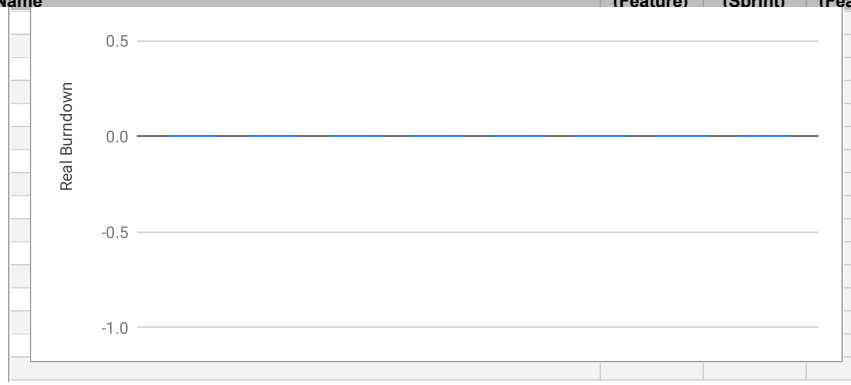
				140		**0**		



#	Theme	Goal	Feature Name	Est. Size (Feature)	Est. Size (Sprint)	Real Size (Feature)	Real Size (Sprint)	Burn-Down





#	Feature Definition of Done	Sprint Release Definition of Done	Project Release Definition of Done
	code peer-reviewed (by at least one team member)	no severe bugs open	no severe bugs open: bugs-issues have been fixed and closed or are labeled with "wont-fix"
	acceptance criteria met	code is cleaned	user manual finished and available
	integrated into a clean build	demo is approved	developer documentation is finished and deliverable
	documentation updated	there is a tagged release candidate	code has been deployed via Docker to the server
	code is well-formatted (according to our norms) and structure		
	Code supports all functions/cases and all responses defined in the API		
	no severe bugs during main functionalities (program should not stop executing due to these bugs, e.g. runtime exception in Docker)		
	Bill of Materials updated if necessary		
	70% of the tests pass	80% of the tests pass	
	important functions shall be tested	(After Sprint 8): code has been deployed via Docker to the server	
	--> if all DoDs are met, the feature qualifies to add to a release
